this text makes use of symbolic algebra and vector matrix algebra to demonstrate a new approach to learning statics symbolic solutions are obtained together with the types of solutions covered in other texts so that students can see the advantages of this new approach this innovative text is an extension of second generation vector statics courses to a new third generation matrix vector statics course a course that addresses deformable as well as rigid bodies and employs matlab matlab is used as a calculator whose built in functions are used to solve statics problems this text uses vectors and matrices to solve both statically determinate rigid body problems and statically indeterminate problems for deformable bodies the inclusion of statically indeterminate problems is unique to this text it is made possible by

using symbolic algebra and a new simplified vector matrix formulation that combines the equations of equilibrium the homogeneous solutions to those equations and a description of the flexibilities found in the deformable elements of a structure to solve directly for the unknown forces moments

a modern text for use in today s classroom the revision of this classic text continues to provide the same high quality material seen in previous editions in addition the fifth edition provides extensively rewritten updated prose for content clarity superb new problems outstanding instruction on drawing free body diagrams and new electronic supplements to assist learning and instruction if you think you have seen meriam kraige before take another look it s not what you remember it to be it s better
