unlike traditional introductory math stat textbooks probability and statistics the science of uncertainty brings a modern flavor to the course incorporating the computer and offering an integrated approach to inference that includes the frequency approach and the bayesian inference from the start the book integrates simulations into its theoretical coverage and emphasizes the use of computer powered computation throughout math and science majors with just one year of calculus can use this text and experience a refreshing blend of applications and theory that goes beyond merely mastering the technicalities the new edition includes a number of features designed to make the material more accessible and level appropriate to the students taking this course today

the fundamental algorithms in data mining and analysis form the basis for the emerging field of data science which includes automated methods to analyze patterns and models for all kinds of data with applications ranging from scientific discovery to business intelligence and analytics this textbook for senior undergraduate and graduate data mining courses provides a broad yet in depth overview of data mining integrating related concepts from machine learning and statistics the main parts of the book include exploratory data analysis pattern mining clustering and classification the book lays the basic foundations of these tasks and also covers cutting edge topics such as kernel methods high dimensional data analysis and complex graphs and networks with its comprehensive coverage algorithmic perspective and wealth of examples this book offers solid guidance in data mining for students researchers and practitioners alike

the fundamental algorithms in data mining and machine learning form the basis of data science utilizing automated methods to analyze patterns and models for all kinds of data in applications ranging from scientific discovery to business analytics this

textbook for senior undergraduate and graduate courses provides a comprehensive in depth overview of data mining machine learning and statistics offering solid guidance for students researchers and practitioners the book lays the foundations of data analysis pattern mining clustering classification and regression with a focus on the algorithms and the underlying algebraic geometric and probabilistic concepts new to this second edition is an entire part devoted to regression methods including neural networks and deep learning

statistical methodology is often conceived by social scientists in a technical manner they use it for support rather than for illumination this two volume set attempts to provide some partial remedy to the problems that have led to this state of affairs both traditional issues such as analysis of variance and the general linear model as well as more novel methods like exploratory data analysis are included the editors aim to provide an updated survey on different aspects of empirical research and data analysis facilitate the understanding of the internal logic underlying different methods and provide novel and broader perspectives beyond what is usually covered in traditional curricula

this comprehensive and accessible book provides an overview of the central and most fundamental methodological issue for empirical researchers how should we interpret statistical significance beginning with a thorough introduction to null hypothesis testing and statistical significance the book then advances the arguments for and against the current interpretations and the use of significance testing in research siu l chow presents a coherent challenge to contemporary criticisms of significance testing and offers a substantial and thought provoking contribution to the debate on the proper role of statistical significance in empirical research
